

MODEL SQ-60A METALLOGRAPHIC SPECIMEN CUTTING MACHINE

Model SQ-60A Metallographic specimen cutting machine is equipped with stainless cover and it can be used to cut various metal and non-metal materials so as to get specimen and observe the metallographic or lithofacies structure. It has cooling system so as to clear up the heat produced during cutting and avoid to burn the metallographic or lithofacies structure of specimen because of superheat. This machine features easy operation and reliable safety. It is the necessary specimen preparing instrument for using in factories, scientific research institutes and laboratories of colleges.

Feature

- Stainless chamber cover
- Equipped with water cooling system
- Lighting system is optional
